

Oh, Behive Install/Running instructions

The install instructions assume the target machine has Apache Maven 3.X or greater installed.

1. Unzip the deliverable into a directory of your choosing.
2. Open a Maven console and navigate to the root of the directory where the folder was unzipped.
3. Type `mvn spring-boot:run` at the command prompt; press Enter.

*The app can be deployed as a .jar or .war file dependent on the environment and needs. Specify the deployment option in the pom.xml in the root directory (e.g. `<packaging>war</packaging>`).
